

Denis Pham

OPERATIONS EXCELLENCE & PERFORMANCE MANAGEMENT

I design how **300+ stores** run — then build the systems that measure it. **SOP → daily tasks → KPI scoring**: one loop, one owner.

300+ RETAIL STORES TRACKED	5-days live KPI REFRESH — EXCEL BATCH → REAL-TIME
3-days 30 min MONTHLY REPORT PREP TIME	5+ INTERNAL TOOLS SHIPPED

 Ho Chi Minh City  Hasaki Vietnam  **10+ years** in quality, operations & performance

ABOUT

I turn operating data into decisions teams can act on.

I run the performance system for Hasaki Vietnam's Cosmetics division, end to end: I **manage the SOP system** that defines how stores operate, turn it into daily task workflows, then measure the results with the **KPI framework I designed** — the same numbers that drive monthly performance reviews. One owner for the whole loop keeps the standards, the tasks, and the scores aligned.

That system thinking comes from **six years of QA/QC** across manufacturing, retail and education, then project management at a game studio before moving into retail performance. My toolbox: advanced Excel, Python pandas, and **Claude Code** for building practical internal tools quickly.

How I work

01 Own the whole loop

When one person owns the standard, the task, and the score, they can't drift apart.

03 Make every number traceable

A metric people are reviewed on has to be defensible back to its inputs, or it won't be trusted.

02 Automate the boring part first

Remove manual data entry so the numbers refresh themselves — the dashboard is the easy last mile.

04 Build what one person can maintain

A practical Excel + JS stack beats a heavier system that needs a whole team to keep running.

A good fit for

- ✓ Retail or operations teams that need field execution turned into metrics they can trust.
- ✓ Companies that want internal tools and dashboards built fast — without a big engineering team.
- ✓ Performance / KPI systems that must hold up under real monthly reviews.

What I bring

Operations & Performance Systems

End-to-end performance loop: SOP → daily workflow → KPI scoring

SOP system management & rollout for retail store operations

Task workflow design, assignment & tracking per store

KPI framework design for store-staff performance reviews

Data Analysis

Excel (advanced — pivots, Power Query, complex formulas)

SQL

Python (pandas, openpyxl)

KPI design & store-level performance metrics

Dashboards & Reporting

Monthly KPI dashboards (300+ retail stores)

Anomaly detection / system-error flagging

Combined sales × KPI cross-analytics

Heatmap visualizations (Chart.js)

Tools & Workflow

Claude Code (daily — building internal tools)

Git / GitHub

FastAPI (Python web APIs)

Quality & Process Management

Six Sigma Green Belt — 7 QC tools, Lean, JIT

Root-cause analysis (5 Whys, 8D, fishbone, 4M change)

Internal audit planning & execution

Quality document systems & non-conformity resolution

Web (learning)

HTML / CSS / JavaScript

Responsive design (mobile-first)

Static site deployment (GitHub Pages)

Brand-consistent design systems

Where I've worked

AUG 2023 — PRESENT

Operations Performance Specialist

Hasaki.vn · Ho Chi Minh City

- Own the operating-performance loop for the Cosmetics division: **SOPs → daily task workflows → compliance tracking → KPI scoring** across **300+** retail stores
- Manage operating SOPs and translate them into assigned, trackable store tasks, keeping standards, execution and performance reviews aligned
- Standardize workflows for recurring retail events, including new-store openings, store closures and liquidation, with clear checklists, handovers and sign-offs
- Structure administrative procurement and vendor evaluation workflows from request and approval through purchasing, receipt logging and weighted quote comparison
- Designed the KPI framework and built its supporting system end to end, covering **300+ stores**, **50+ KPIs** and **100+ data fields**
- Moved KPI tracking from **5-day** Excel batches to a **real-time** view and cut monthly report preparation from **3 days** to **~30 minutes**

NOV 2021 — JAN 2023

Project Manager

SIPHER · Ho Chi Minh City

- Defined project scope, goals and deliverables with Animation & VFX leads; built and maintained project plans, timelines and budgets
- Managed outsourced vendors end-to-end — contract signing, cost and delivery negotiation, and production progress tracking to keep assets on schedule
- Ran cross-department communication: status, progress and risk reporting, project documentation, meetings, agendas and follow-up on decisions

NOV 2019 — NOV 2021

Quality Assurance Engineer

Allied Technologies · Ho Chi Minh City

- Led root-cause investigations of product defects and customer complaints using **5 Whys, 8D, fishbone and 4M-change** analysis
- Identified manufacturing-process risks, analyzed data trends and implemented preventive measures to minimize defects
- Prepared monthly in-house quality reports and customer-facing quality documentation (Shipment Approval, RoHS, inspection documents)
- Planned QC manpower per production line with HR and line managers to keep quality coverage fully staffed

APR 2019 — OCT 2019

Quality Assurance Inspector

VinMart+ (VinCommerce) · Vietnam

- Inspected stores against checklists covering hygiene, goods display, brand identity, service quality and process compliance
- Supported stores on food-safety and hygiene incidents — direct inspection, complaint handling and removal of non-compliant products
- Ran probability-based inventory audits (**10–20** item codes per visit) and appraised inventory-difference explanations
- Investigated fraud, loss and theft cases; signed off construction and equipment acceptance for newly opened stores; managed store camera-system operations

MAR 2017 — APR 2019

Quality Assurance Leader

FPT Academic International · Ho Chi Minh City

- Implemented the university-wide **KPI plan** for quality data collection and monitored alignment on the **BSC strategy system**
- Built the annual internal-audit plan, assigned and led the QA team, and reported audit results and countermeasures to directors
- Owned the quality-document system end-to-end: evaluation, non-conformity resolution, releases and cross-department rollout
- Contributed to drafting company decisions, coordinated their release with the clerical department and monitored implementation

NOV 2015 — NOV 2016

Quality Control Inspector

KIMDUC Co., Ltd · Ho Chi Minh City

- Inspected raw materials (PP fabrics, films, threads, straps) and semi-finished goods across spinning, weaving, cutting and coating stages
- Reported material and work-in-progress quality to management; partnered with purchasing and production to resolve quality issues

The work I'm proudest of right now

Hasaki KPI System

End-to-end KPI system for 300+ cosmetics retail stores: raw Excel files → automated calculations → automated recording → interactive monthly dashboard. Tracks 50+ KPIs across 100+ data fields and flags anomalies such as negative KPI values and formula-source mismatches. It moved KPI tracking from 5-day Excel batch runs to a real-time view, and cut monthly report preparation from 3 days to ~30 minutes.

CONTEXT	Hasaki's Cosmetics division scores 300+ stores on how well they run — numbers that feed real monthly performance reviews.
PROBLEM	Scores lived in hand-compiled Excel: ~5 days to refresh, no single basis to compare stores, and quietly accumulating errors.
MY ROLE	I designed the KPI framework and built the whole pipeline — ingest → calculation → recording → dashboard — solo.

Company-Wide Task Workflow System

The execution layer of the operating loop I run — it turns SOPs into daily task workflows, assigns them to store teams, and tracks completion and compliance across 300+ stores. Head office sees, in one place, whether every store is doing what the standards require — and the results feed straight into KPI scoring.

Hermes — Personal AI Agent

A self-hosted AI agent I built and run on Docker — my own personal assistant. It helps review and draft content, organize work, and handle day-to-day operations tasks, and is being actively expanded. (Hermes ran the copy review behind this very site.)

Docker

Self-hosted

Claude

Combined Sales × KPI Dashboard

Joins two separate dashboards (Sales + KPI) to surface a key insight: which stores have low sales but suspiciously high KPI — a flag for performance reviews.

Data joining

Cross-analytics

JavaScript

Bills Dashboard

Heatmap of bills × hour × weekday plus a cash deposit calculator, built from raw payment receipt files. FastAPI backend + static frontend.

JS

Operations Workflows

Standardized, auditable workflows I built for recurring retail-operations events — each breaks into assigned, tracked tasks so every site runs to the same standard:

- **New store opening** — site readiness, fit-out, pre-opening checklist, grand-opening sign-off
- **Store closure & liquidation** — inventory count, asset liquidation, handover, close-out
- **Admin procurement** — request → approval → purchase → goods-receipt logging
- **Vendor evaluation** — weighted scoring of suppliers from multiple quotes (template + AI skill)
